1. OVERVIEW

Surf-Lock is an easy to use tool that manages basic Internet access in your Vision 5 classroom. As you go through this getting started guide, you will learn how to:

- ◆ Install the Surf-Lock Master and User modules
- ◆ Use the Vision Master to lock student Internet access
- ◆ Lock and un-Lock Internet access on a single user PC

Note: Surf-Lock is a Plug-In for Vision 5, and does not function as a stand-alone product.

2. SYSTEM REQUIREMENTS

Computer/configuration

- ◆ Windows 98/Me/NT/2000/XP operating systems. Heterogeneous Windows environments are supported
- ◆ Server independent
- ◆ Internet Browser independent
- ◆ Surf-Lock only locks the http protocol
- ◆ Vision 5 or higher

Note: Surf-Lock blocks the http protocol at the system level, which is why it is browser independent.

3. INSTALLING THE MASTER MODULE

Master Module installation

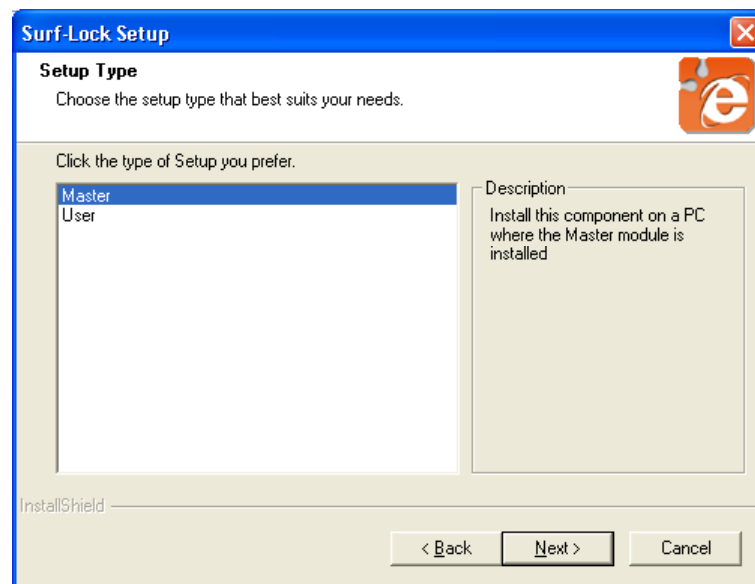

The Surf-Lock Master module must be installed on the same computer as the Vision Master module is installed. This is the module from which all Vision functions are controlled.

Before you install the Master make sure that you have your license activation serial number. This will be emailed to you from MasterSolution when you purchase the product.

Don't worry if you don't have the serial number at the time of install; it can always be entered afterward. However, Surf-Lock will not work until the serial number is entered into the Product Licensing Utility.

1. If you downloaded Surf-Lock from the Internet, browse to the directory in which the download is saved and double-click on the file **setup.exe** to begin the Surf-Lock installation.
2. Click on the **Next** button on the *Welcome* window. When the License Agreement window appears, click **Yes** to agree and move to the next step.

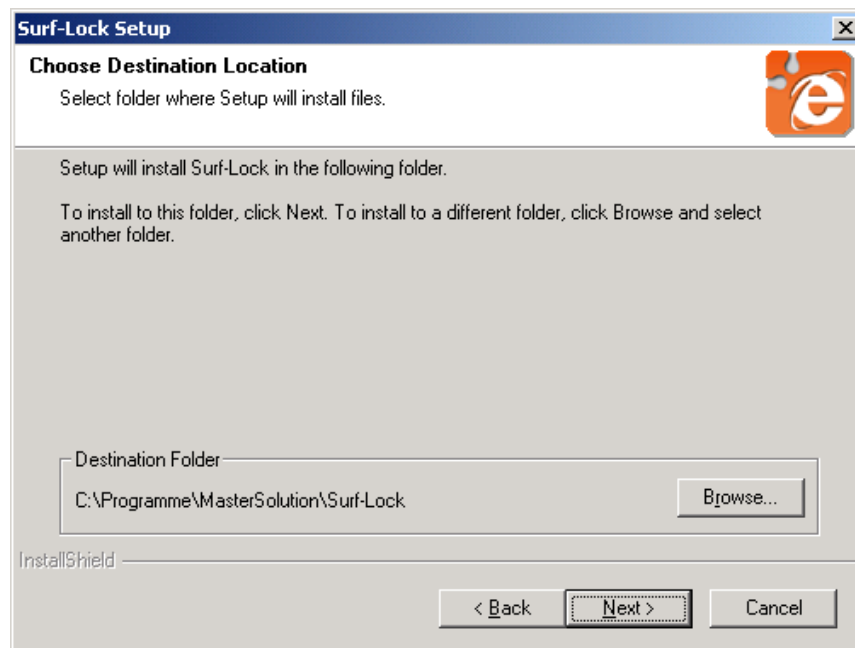

- At the *Setup Type* window you will see the option to install a **Master Module** or a **User Module**. Select the Master module when installing on the Vision Master PC.

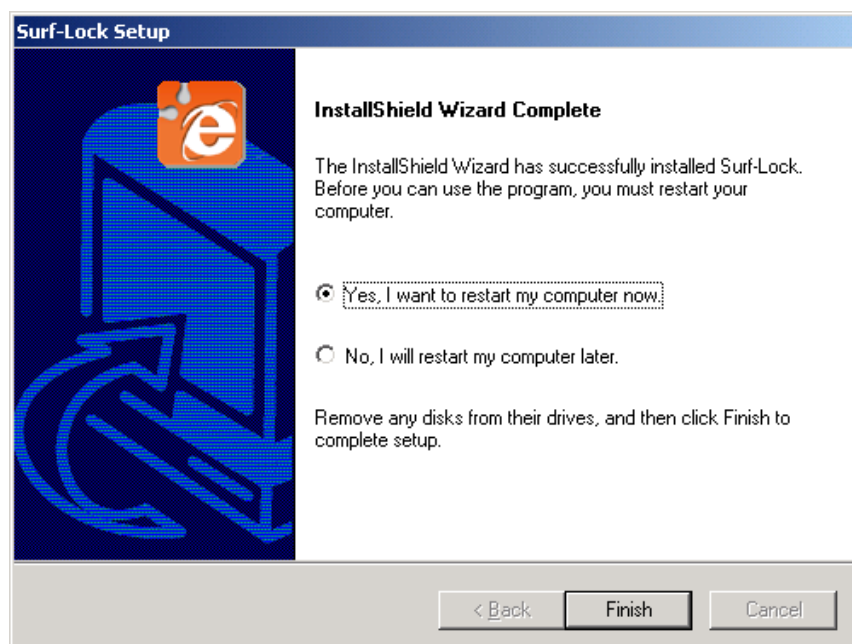

- The *Customer Information* screen requires you to enter information including your name, company, and Surf-Lock serial number. You may enter any information you choose in the Name and Company fields. Enter your Surf-Lock serial number and then click **Next**.

The screenshot shows the 'Surf-Lock Setup' window with the 'Customer Information' tab selected. The window has a blue title bar and a standard Windows XP-style border. Inside, the text 'Please enter your information.' is at the top. Below it, a larger text area says: 'Please enter your name, the name of the company for whom you work and the product serial number.' There are three text input fields: 'User Name:' with the text 'Dean Tester', 'Company Name:' with the text 'MasterSolution AG', and 'Serial Number:' with the text '????'. At the bottom of the window, there are three buttons: '< Back', 'Next >', and 'Cancel'. The 'Next >' button is highlighted. The 'InstallShield' logo is visible in the bottom left corner.

5. In the next window, accept the default installation path and click **Next**.

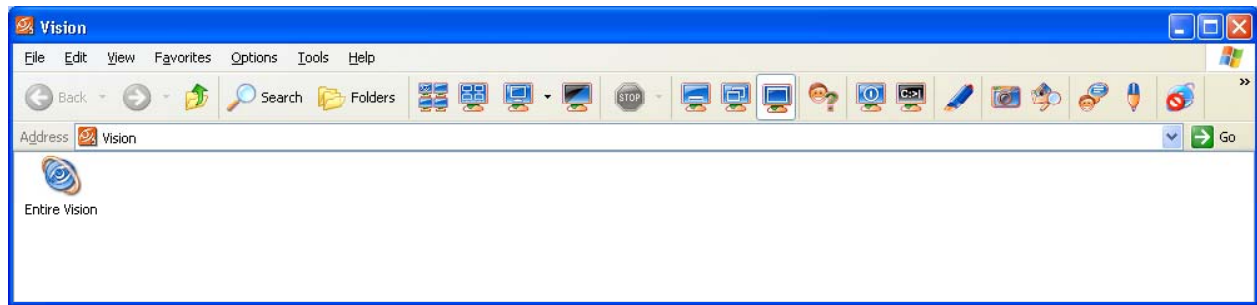

6. Click on **Finish** to restart your computer and complete the Surf-Lock Master Module installation process.

7. Once the computer reboots you should see the Surf-Lock Icon on the Vision Shortcut Tool Bar at the top of the screen...

...and in the Vision Console Toolbar

4. INSTALLING THE USER MODULE

The User module must be installed on the same computer as the Vision User module is installed.

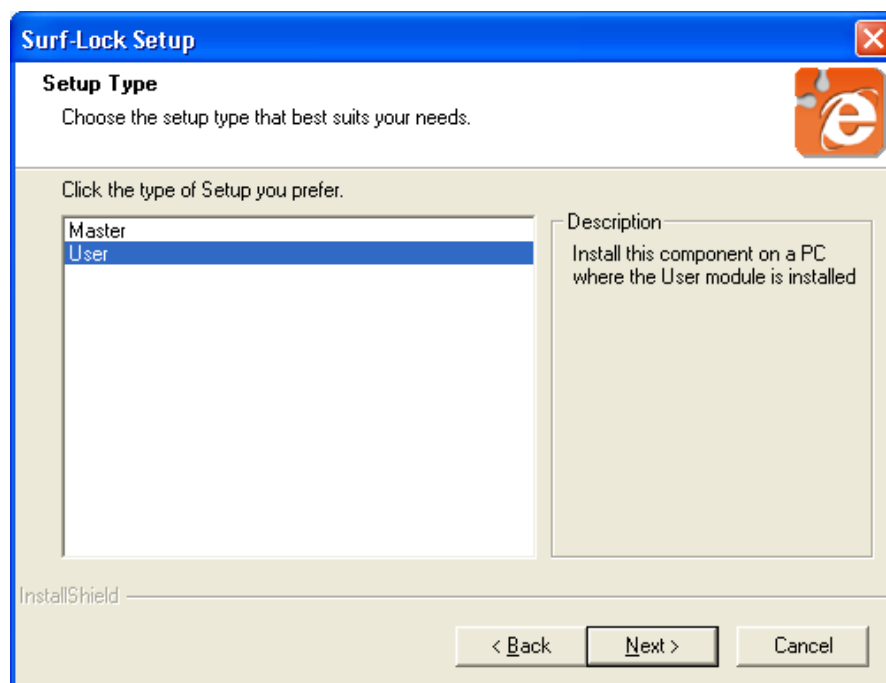

Note: The User Module installation does not need any *serial number*.

1. If you downloaded Surf-Lock from the Internet, browse to the directory in which the download is saved and double-click on the file **setup.exe** to begin the Surf-Lock installation.

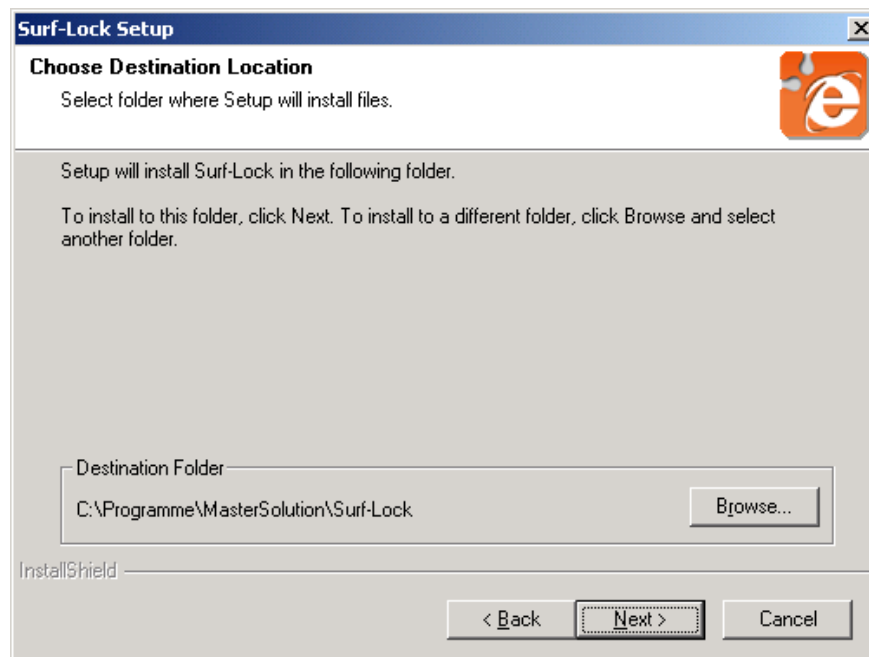

Click on the **Next** button on the *Welcome* window. When the License Agreement window appears, click **Yes** to agree and move to the next step.

2. At the *Setup Type* window you will see the option to install a **Master Module** or a **User Module**. Select the User module when installing on the Vision User PC.

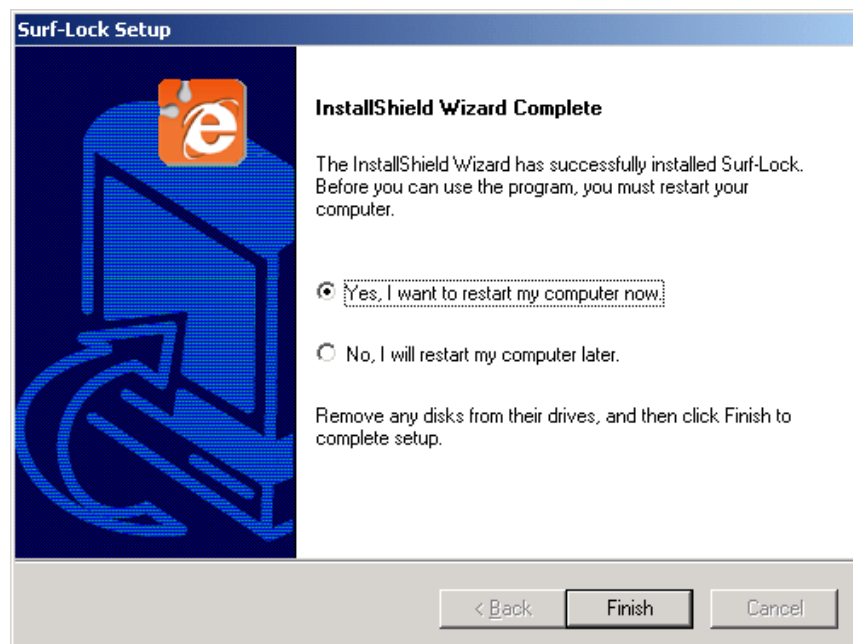

Select the **User**.

3. In the next window, accept the default installation path and click **Next**.

4. Click on **Finish** to restart your computer and complete the Vision Master Module installation process.

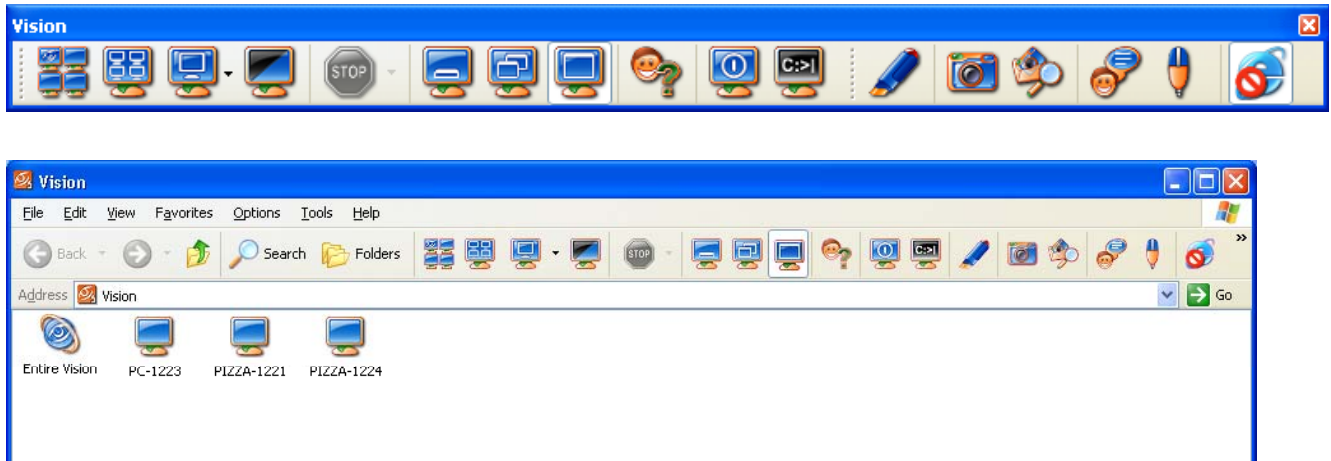

Note: Surf-Lock adds no icons or buttons to the User Module. To see if the Surf-Lock User Module is installed, check the "Control Panel → Add/Remove Programs" and check to see that the Surf-Lock User Module is listed.

5. WORKING WITH SURF-LOCK

Surf-Lock is very easy to use! As soon as your clients are connected, Internet access can be blocked with a single click.

The Surf-Lock button behaves like a normal switch; When it is pressed, the button shows its active status as per below:

When the icon or button is active, Internet access is denied to your connected Users.

To allow students to use the Internet again, press the Surf-Lock button a second time. The icon will change back to its inactive status and release the student machines from Internet blocking.

How to lock a single or a group of Users?

If you need to lock single or a group of users, simply select the users in the Vision Console and **USE the Surf-Lock Icon in the Vision CONSOLE.**

To grant back Internet access to Users, release the Surf-Lock Icon, again.

Note: The Surf-Lock Icon on the Vision Shortcut Tool Bar controls always all connected Users. The Surf-Lock Icon in the Vision Console Toolbar allows to control single or a group of Users.

6. WHAT DOES SURF-LOCK BLOCK?

Blocked: Surf-Lock blocks the **http protocol** within TCP/IP (port 80)

Not blocked: Surf-Lock does not prevent access to **non-http protocol** items such as: **ftp, e-Mail, https**
