Instructions:

1. Create a GUI application in which the user enters a value for inches. When the user clicks a button convert the value to feet and inches and to yards, feet and inches, using separate methods for the calculations as explained in other Chapter 7, labs.
2. Insert a comment at the top of the code which contains the name of the lab, the date the lab was written and the person who wrote the lab
   - Labs will not be graded unless this is present
3. Compress and archive the solution folder and submit it to the class web site

Example Output:

![Inches Conversion](image)

Grading:

2 – General, comments, formatting, functionality, etc
4 – GUI elements (names, text, etc)
2 – Method declaration
2 – Method code
2 – Method call
